

Ontrack® PowerControls™

Exchange Search and Restoration Simplified

Ontrack® PowerControls™ is a simple, yet powerful tool for searching, restoring, exporting, and analyzing mailbox items directly from Microsoft® Exchange Server backups, EDB and Information Store files, or your live Exchange server.

Think about the number of email messages and mailboxes stored in your organization's Exchange server backups. If you needed to find a single email message or mailbox in your backups, how long would it take? If the very thought of needing to locate and restore messages or mailboxes from your Exchange server backups makes you cringe, Ontrack PowerControls is the perfect solution.

The proliferation of electronic data has resulted in an increase of stored data volume and requests to locate and restore specific messages or mailboxes. Ontrack PowerControls is a forensically sound email management tool that helps IT teams efficiently search, recover and restore messages, mailboxes, attachments and other Microsoft® Office Outlook® items from any previous full backup. Ontrack PowerControls will reduce the time and resources necessary to respond to a request for messages and attachments.

Additionally, this allows administrators to easily export relevant data for ediscovery review, or to an archiving system for compliance and investigative needs.

Alternative methods of granular Exchange item restoration, such as using single mailbox or "brick-level" backups, are typically very slow and often expensive due to the additional storage space required. Another alternative – restoring a full backup to a recovery server – can take many hours to complete and requires a hardware purchase. Even with these alternatives, searching through the backup to find the items you need is still necessary.

Create IT Efficiencies

Simply put, Ontrack PowerControls dramatically cuts the time and expense normally associated with Exchange item restoration.

- » Eliminate the need for brick-level backups or Exchange recovery servers, and perform granular message and mailbox recovery with ease
- » Recover, restore, search, and export Exchange Server archived and recoverable items with the same convenience as active mail items

- » Restore items directly to your production Exchange server or any PST file directly from your server backups or un-mounted EDB's
- » Simplify email management tasks such as Exchange server migration and mailbox creation
- » Granularly search, collect, and export content in a forensically sound manner within a live Exchange Server environment, providing a more comprehensive and accurate data collection

Reduce Search Time

Not only is Ontrack PowerControls an invaluable recovery tool, but a powerful searching tool as well. Locating messages, mailboxes and attachments that meet precise search criteria can be achieved much faster with Ontrack PowerControls. Use keywords and other criteria to search across multiple databases simultaneously, locating the items you need and exporting them back to another location with a simple drag and drop.

The robust search capabilities of Ontrack PowerControls helps your organization:

- » Support in-depth internal or external investigations and ediscovery.
- » Locate and export information for regulatory and litigation purposes.
- » Preserve and collect documents and metadata for litigation hold.
- » Analyze Exchange usage over a specific time period.

Simple, Yet Powerful

Ontrack PowerControls offers an easy-to-use interface where you can simply drag and drop mailboxes and messages from source to destination. For larger restoration or export tasks, Ontrack PowerControls features a command line interface allowing you to easily batch repetitive processes such as multiple copy and export without the need to initiate the software. Plus, Ontrack PowerControls allows you to open multiple sources and destinations including EDB and PST files at the same time. It also installs on any Windows®-based workstation, and requires no changes to your existing backup procedures or architecture.

The time and hardware costs saved by utilizing Ontrack PowerControls to conduct email recovery and restoration, data collection, and migration yield an ROI well beyond the cost of the tool itself.

Simply put, Ontrack PowerControls dramatically cuts the time and expense normally associated with Exchange item restoration.
