

Restore your clients' mixed environments instantly with vStandby AIP

Scenario

Your clients don't have all the same infrastructure. You encounter old and new Windows physical servers, others clients have virtualised Linux and Windows machines on their Microsoft Hyper-V, Citrix Xen or VMware ESXi, and some may have a mix of servers and PCs in physical and virtual environments. As an IT reseller, you want to be able to restore all your clients' machines as fast as possible in your VMware ESXi environment (hosted or in your office), using the same IT software for both your clients and your private cloud for all technicians to master it faster and more efficiently.

Solution

YOUR CLIENTS
